

ENERGY EFFICIENT
CONSTRUCTION SYSTEM

Price List

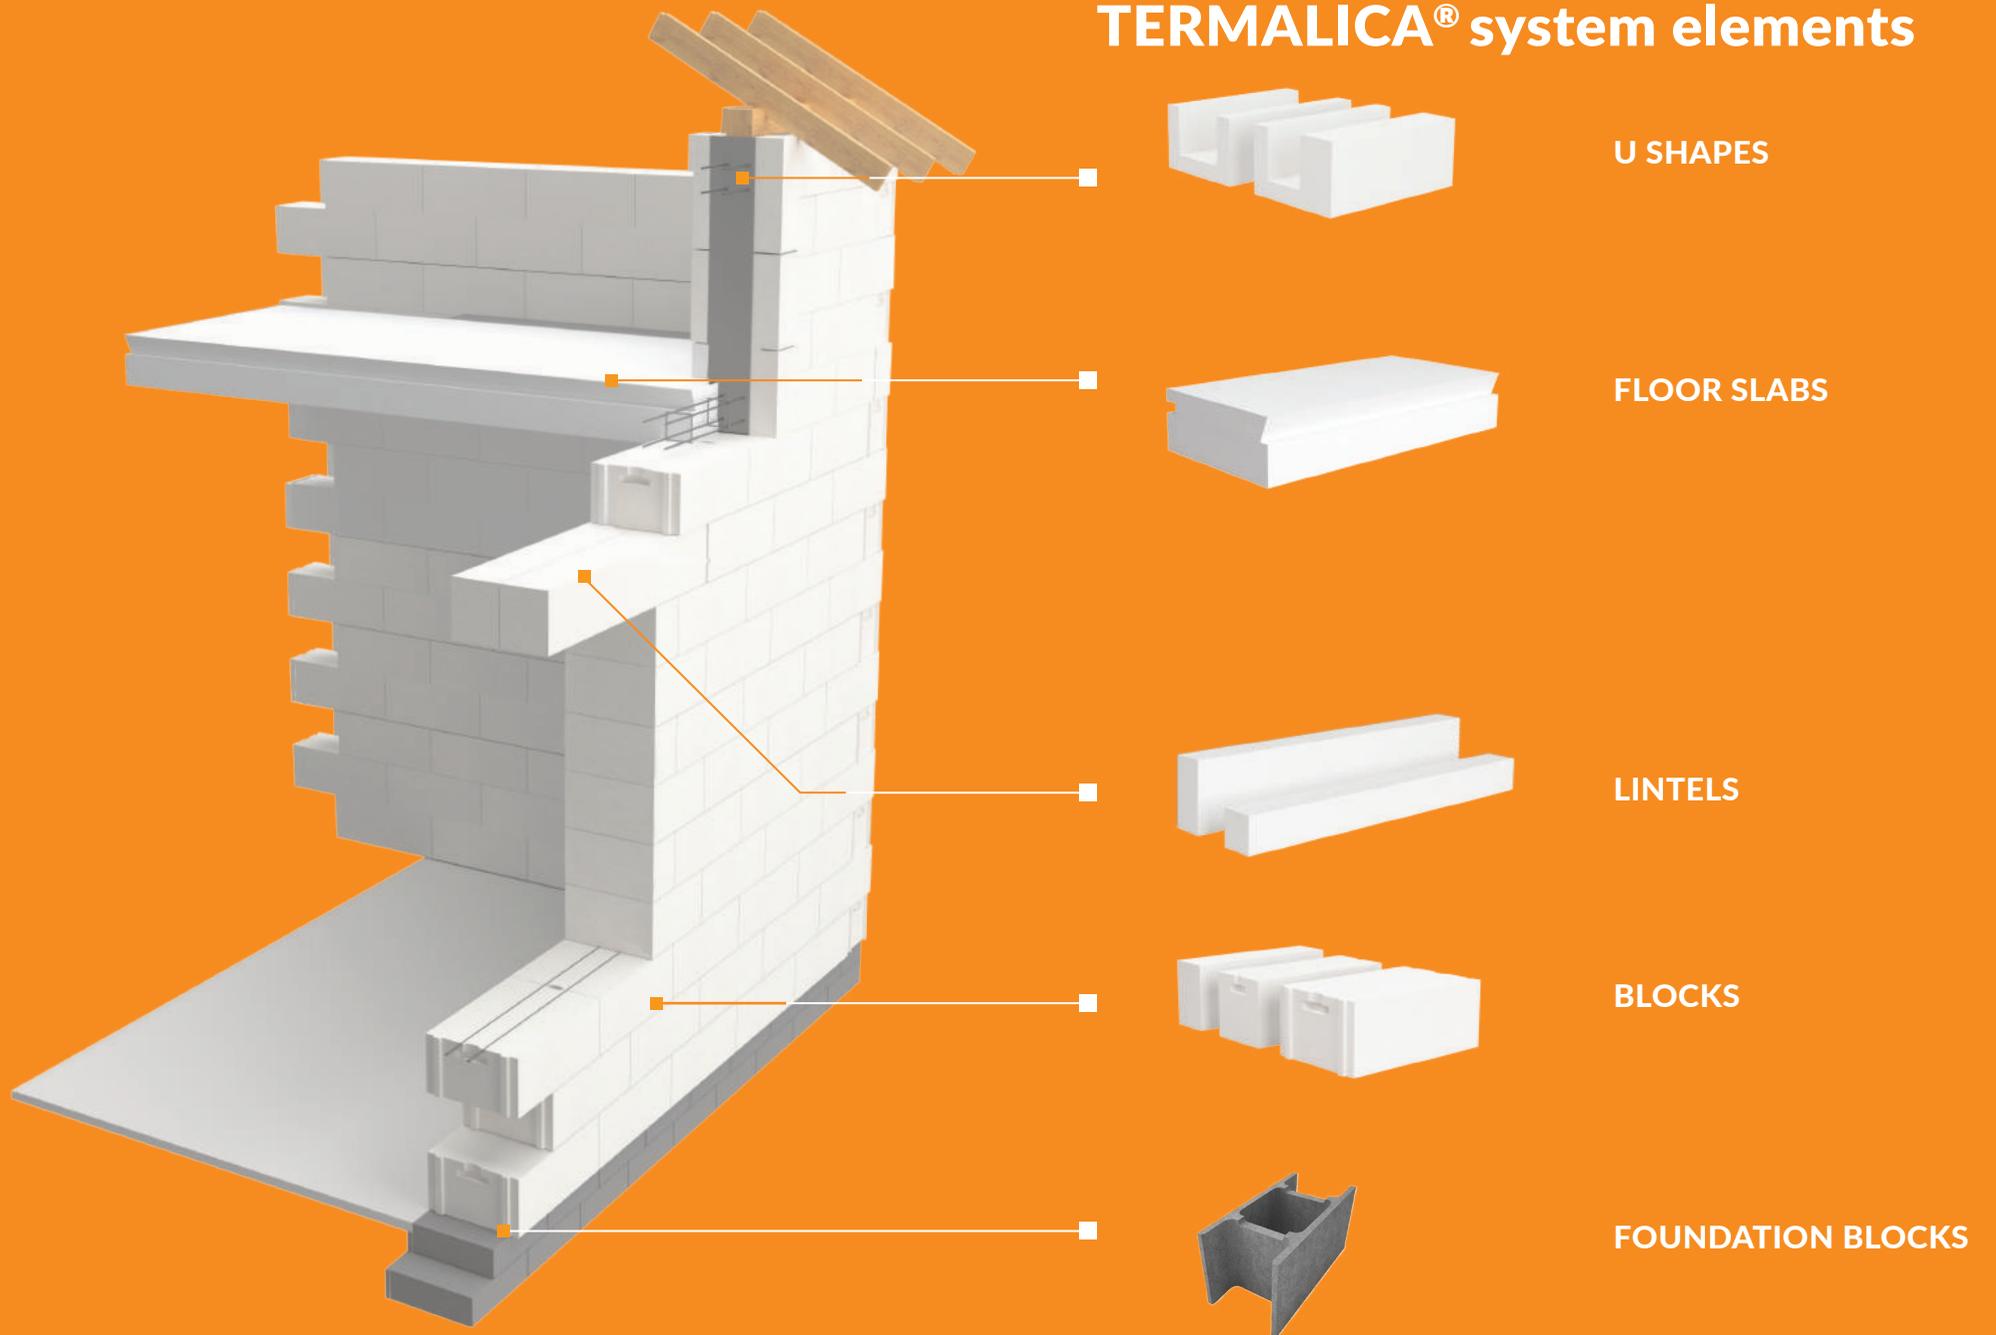

Termalica® is a comprehensive system of perfectly matched elements allowing for the construction of an energy-efficient house from the foundations up to the ceiling. It consists of blocks for building walls, window and door lintels, ceiling elements as well as concrete shuttering blocks. ACC blocks are available in different density classes so that walls can be built in both one-layer and multi-layer technologies.

Termalica® system elements are made from high-quality ACC - material with the best thermal insulation properties available on the market. Blocks that constitute the main elements for erecting walls are tongue-and-groove profiled so that they require no mortar in vertical joints. Termalica blocks meet the requirements of TLMB - the most stringent dimensional tolerance class. It means that they adhere one to another almost ideally, which allows for constructing walls more uniform in terms of the material used, resulting in a warmer house.

Excellent thermal insulation parameters of ACC walls will allow you to build light single-layer walls 300, 350 and 400 kg/m³. A house built with **TERMALICA® EXTRA** or **CLASS** blocks requires no additional insulation such as polystyrene foam or mineral wool. The warmest elements of the system designed for wall erection are **TERMALICA® EKSTRA** blocks with a thickness of 48 cm. They are characterized by an excellent heat transfer coefficient $U=0.16 \text{ W}/(\text{m}^2\text{K})$. Also, in the case of building the house in a double-layer technology, walls made of Termalica blocks provide a heat transfer coefficient lower by approx. 20-30% in relation to other masonry materials.

TERMALICA® system elements

SINGLE-LAYER WALL SYSTEM

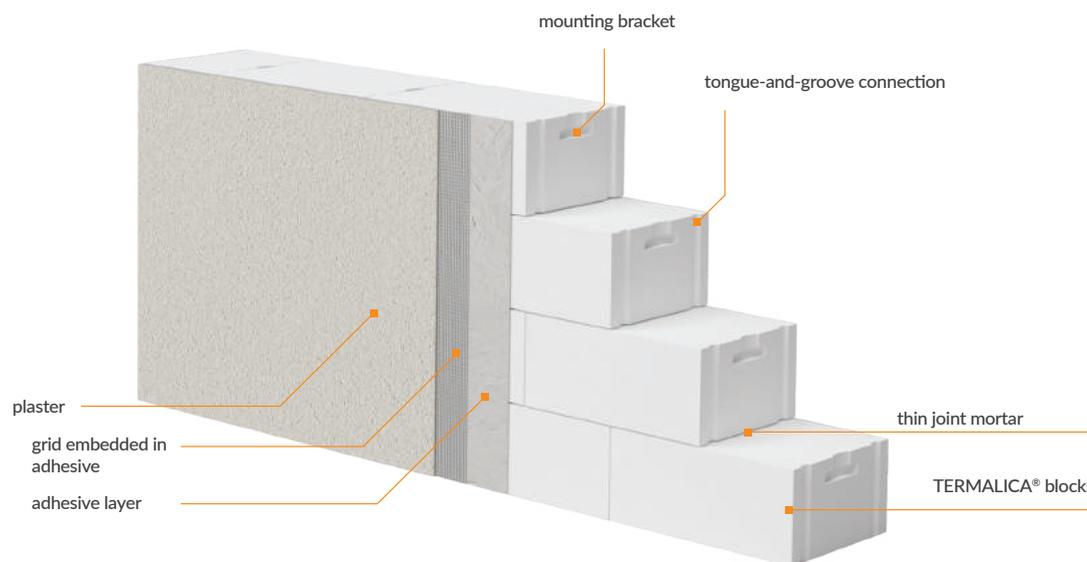

TERMALICA® EKSTRA and **TERMALICA® KLASA** blocks are the warmest materials for the construction of single-layer walls.

Due to perfect matching of individual elements made of cellular concrete, single-layer walls are built relatively quickly and inexpensively - mainly owing to less labor and no need to apply thermal insulation using wool or polystyrene foam.

Single-layer walls made of the lightest types of blocks, 300 and 350, with a thickness of 48, 40, 36.5 and 30 cm, guarantee excellent thermal properties.

The warmest single-layer wall made of **TERMALICA® EKSTRA** blocks with a thickness of 48 cm allows you to obtain a heat transfer coefficient $U=0.16 \text{ W/m}^2\text{K}$, which already exceeds the targeted construction standards foreseen for 2021, specifying the performance of wall insulation below $U=0.2 \text{ W/m}^2\text{K}$, and allows for substantial savings - both at the project stage and during the life of the building.

TERMALICA® KLASA is a set of blocks for single-layer walls that ensure energy efficient properties of the building and meet current requirements for insulation of the building envelope $U \leq 0.23 \text{ [W/m}^2\text{K]}$.

TERMALICA® EKSTRA	Block thickness [cm]	Heat transfer coefficient U [W/m ² K] for $\lambda_{10,D}$	Average compressive strength [MPa]
TERMALICA 300	48	0,16	2,0
TERMALICA 350	48	0,17	2,5
TERMALICA 300	40	0,19	2,0

TERMALICA® KLASA	Block thickness [cm]	Heat transfer coefficient U [W/m ² K] for $\lambda_{10,D}$	Average compressive strength [MPa]
TERMALICA 350	40	0,21	2,5
TERMALICA 300	36,5	0,22	2,0
TERMALICA 350	36,5	0,23	2,5
TERMALICA 400	40	0,23	2,5

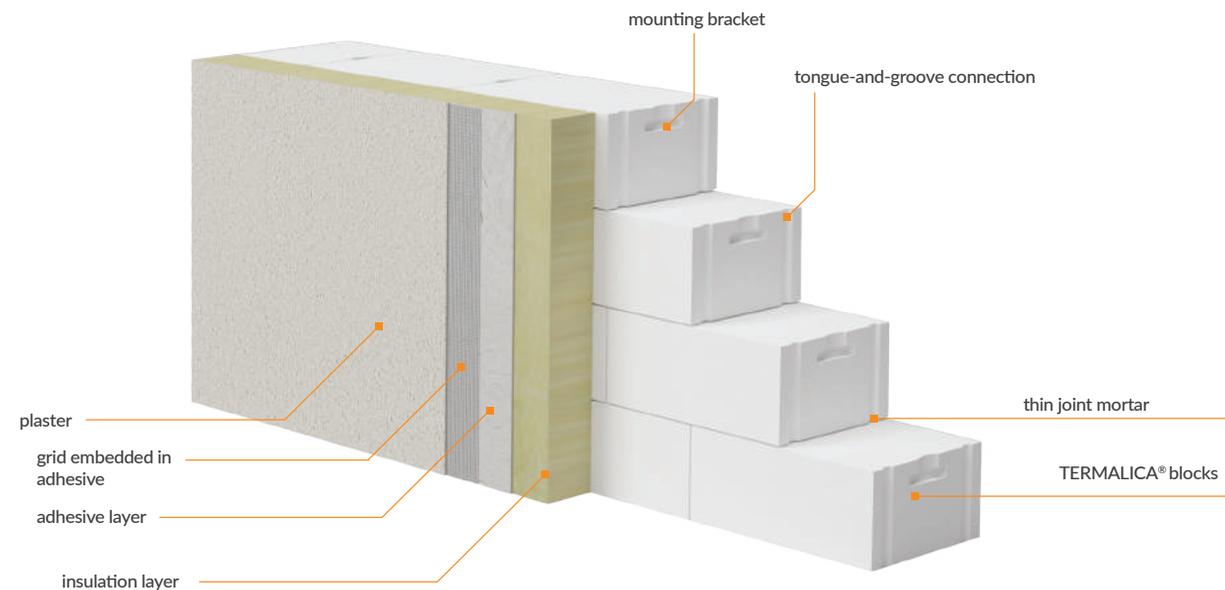

DOUBLE-LAYER WALLS

Double-layer and multi-layer walls

When building double-layer walls, the choice of appropriate construction material is essential - in the case of using TERMALICA® cellular concrete blocks, thermal insulation of outer walls is 20-30% better compared to walls made of other masonry materials such as ceramic bricks or silicate blocks, built in the same system of structural layers.

TERMALICA	Block thickness [cm]	Thickness of thermal insulation* [cm]		
		10	12	15
		Heat transfer coefficient U [W/m²K] for $\lambda_{10,D}$		
TERMALICA 350	24	0,19	0,18	0,16
TERMALICA 350	30	0,17	0,16	0,14
TERMALICA 350	30	0,17	0,16	0,14
TERMALICA 400	24	0,20	0,19	0,16
TERMALICA 500	24	0,23	0,21	0,18
TERMALICA 600	24	0,25	0,22	0,19
TERMALICA 600	20	0,26	0,23	0,20
TERMALICA 700	24	0,27	0,23	0,20

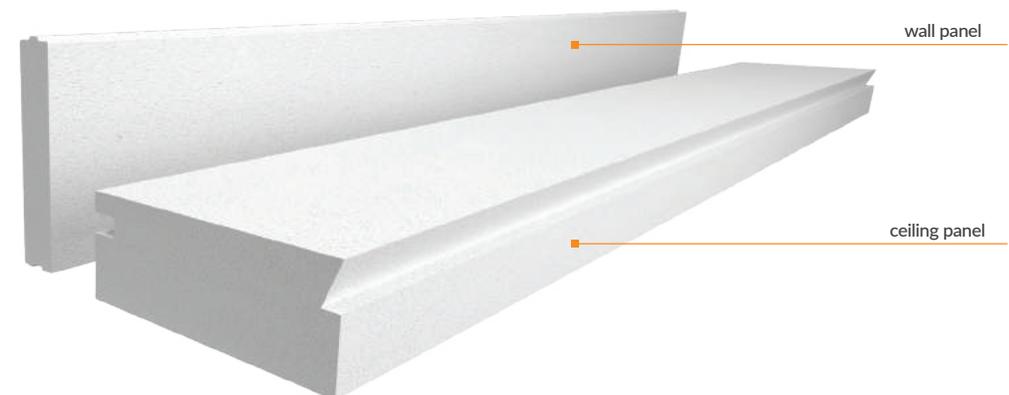

* Thermal conductivity of the thermal insulation material $\lambda = 0,042$ W/mK

TERMALICA® SPRINT

Large-format panel walls and ceilings

Large-sized TERMALICA® panels made of reinforced cellular concrete are designed for the construction of walls and ceilings in single-family and multi-family houses as well as in industrial and public buildings. The use of prefabricated custom-sized TERMALICA® SPRINT panels and elimination of shuttering works and installation supports significantly reduce the required construction time.

TERMALICA® TILES

Cellular concrete tiles for partition walls, renovation and finishing works and interior designing.

TERMALICA® tiles are lightweight cellular concrete elements that allow for quick and easy renovation works inside and outside buildings.

The number of applications of thin TERMALICA® tiles is infinite, and the possibilities depend solely on the creativity and imagination of the designer.

Examples of applications:

- screens and partition walls
- bath housings
- shower walls
- fireplaces
- kitchen and bathroom cabinets and shelves
- barbecue constructions

✓ Simple installation and processing

The ease of processing and installation makes it possible to build any construction by yourself. The material can be easily cut and grinded, which gives unlimited potential for applications. Tongue-and-groove locks require no pointing of vertical joints.

✓ Even and smooth walls

Due to precise dimensions up to 1 mm, the tiles may be connected with a thin-layer mortar or mounting foam. An even surface does not require plastering under ceramic tiles. Laying the tiles is clean and easy both for professionals and amateurs.

✓ Durability

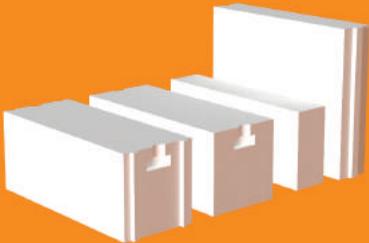

Elements made of TERMALICA tiles are characterized by high durability and resistance to mechanical loads. The tiles are fireproof - produced from natural raw materials and they meet the criteria and requirements for the safest Euroclass A1.

✓ Ideal for renovation works

The light weight of the components facilitates their transport and laying. Surfaces covered with Termalica tiles create no overload for ceilings and can easily match the existing walls.

✓ Health and safety

TERMALICA tiles can be applied in a highly humid environment. Natural materials used in the production process ensure high resistance to biological corrosion and prevent the growth of bacteria, mould and fungi.
